

Keeping an Accurate Google Directory is now Critical

If the data within your Google Directory is inaccurate, some of the features within Google Workspace wouldn't be as effective as they should be.

Google Contacts

Users will start to get a closer look at just what's stored within the Google Directory, and if their data is up to date. They will be able to view a contacts location, telephone number, and even where they side within the organisation structure.

Dynamic Google Groups

Attributes such as job title, building location, or even a custom attribute can be used to define the membership of a Google Group. As Google Groups can be used as security containers for accessing services or data it's extremely improvement that this information is kept up to date and accurate.

Organisation View

Within Patronum you can search for colleagues using the information stored within the Directory as well as browse through your organisations reporting structure. Find colleagues and then see who's within their team, or who they report in to within your organisation.

Create a Healthy Google Directory

Using Patronum you can define what information within your Google Directory is mandatory and obtain a report of missing or incorrectly formatted information. You can quickly and effortlessly create an accurate set of information stored within your Google Directory that can be an essential part of your Cloud Infrastructure.
