

Remove leavers from My Google Contacts

What if that individual within your Other Contacts no longer exists at the email address you have stored, it can be a pain, especially for end-users within your organisation who don't know how to access contact information via Google Contacts.

Patronum removes Other Contacts from Google Contacts

Within Patronum, you can create an offboarding policy that can automatically search all users within your Google Workspace Google Contacts and remove leavers as part of the process to remove them from your Google Workspace domain.

Within Patronum create a policy, select CONTACTS, select the deprovisioning options and then "Remove ex-employee from other users my contacts".
